

Parametric pressure pulse generator with separate control of the closing elements contains the supply and discharge lines of the energy carrier and the housing. Two closing elements of the first and second sealing areas are mounted in the housing, which in the initial position form the pressure, intermediate and drain cavities. Wherein, the closing element of the second sealing area is installed with one end in the central bore of the housing, and with the other end it is installed with the possibility of contact with the adjusting cup, on which the lock nut of the adjusting cup is installed, with the cover. The closing element of the first sealing area is supported with one end in the central bore of the housing, and with the other end it is installed with the possibility of contact through the plunger with the adjusting screw, on which the lock nut of the adjusting screw is installed.
