

Magnetic holder for grinding and polishing discs contains a removable disc equipped with a textile fastener, which is designed to be held in place by magnets mounted in the lower part of the housing. The housing has a central protrusion on top with a threaded hole to be mounted on an angle grinding machine. On the bottom, it has a central guide lug for mounting the removable disc, which has a central hole corresponding to the guide lug. The central guide lug for mounting the removable disc and the central hole in the removable disc, which corresponds to the central guide lug, are designed to prevent the removable disc mounted on the central guide lug from rotating around it.
