

Device for determining time parameters of mobile firefighting unit operator includes a test influence unit, a sensor, a generator, a comparator, two AND elements, two NOT elements, and two counters. The generator output is connected to one of the inputs of the first and second AND elements, the outputs of which are connected, respectively, to the inputs of the first and second counters. The sensor output is connected to one of the comparator inputs, the output of which is connected through a NOT element to the first input of the second AND element. Additionally, a control unit is introduced, the first output of which is connected to the test influence unit and to the first input of the first AND element, the third input of which is connected to the output of the first NOT element, the input of which is connected to the sensor output and to the second input of the second AND element. The second output of the control unit is connected to the first input of the comparator.
