

Special lifting and transport machine comprises an open lifting and lowering cabin, where a winch with a control unit is located, to which a traction cable is attached, one end of which is designed to be secured on the roof of the building, while the other end is connected to the lifting and lowering winch of the open cabin, which is connected by two ropes to a backup control unit and auxiliary winches, which together with a line-throwing apparatus, are mounted on the vehicle chassis. The cabin is an elevator-type cabin, which is additionally equipped with special triple wheel blocks designed to allow the cabin to be adjacent to the building when lifting and lowering the cabin.
