

Mulch collector for rows of potatoes grown on the field surface comprises a drum with flexible tines, between which curved guide plates are secured, and mounted on side plates hinged to the collector frame perpendicular to the direction of movement, a cross conveyor and a device for forming a windrow or bales from the collected mulch, a frame with support wheels, a trailer hitch tongue and a drive mechanism. Wherein, the curved guide plates of the drum are made combined, the lower part of which is a stalk lifter with a support and contour-following surface on the lower side, while the front surface of the stalk lifter is made in the shape of a logarithmic spiral.
