

Working fluid station for the electric arc dimensional machining installation based on the drilling machine consists of a gear pump with an electric motor, a hydraulic tank, a mesh filter element, a valve for regulating the pressure of the working fluid and a pressure gauge. The gear pump with an electric motor is placed in the lower part of the hydraulic tank, and the working fluid station itself is made in the form of a pedestal on which the drilling machine is installed. Wherein all the elements of the working fluid station are located inside the pedestal.
