

Recumbent electric trike features a three-wheeled design with two front wheels and one rear wheel, a steering system, and a braking system. The frame is equipped with a platform designed to support the user's body in a reclined position, with the body aligned in the direction of travel. The front wheels are equipped with independent suspension; the rear wheel is connected to an electric drive system that includes an electric motor; the braking system covers all three wheels. The control system is located at the front of the frame, at a height that is easily accessible to the user's hands in a reclined position.
