

Method for preparing medicinal composition in the form of suspension for deworming dogs with flavor correction involves mixing the active ingredients - milbemycin oxime and praziquantel, with excipients. The active ingredients, milbemycin oxime and praziquantel, ground to 0.1–0.2 mm, are added to water at a temperature of +40–50 °C and a mixer blade speed of 60–90 revolutions per minute. Next, excipients are added: first - polyethylene glycol 400, then – bee honey, finally - the "chicken meat" flavoring. The process is completed by increasing the mixer speed to 120–160 revolutions per minute for 20–30 seconds.
