

Flexible modular conveyor comprises movable supports interconnected by a freely bendable support module equipped with a flexible endless conveyor belt and side tensioning modules, and includes a drive. The support module is mounted on the movable supports and comprises two end modules and at least one intermediate module, designed to be connectable, and is constructed with a flexible frame on which wheels are mounted along the length of the load-bearing module on both sides, allowing the endless conveyor belt to slide along their working surfaces during operation.
