

Method for obtaining [1,3]thiazolo[5,4-b]pyridine derivatives of the general formula:

where R₁=H, Br, CF₃, COOCH₃, Cl, R₂=CH₃, CH₂Cl, C₆H₅, COOCH₃, CH₂COOCH₃, by reacting 3-aminopyridine derivatives with acid chlorides in organic solvent in the presence of condensing agent. As 3-aminopyridine derivatives, compounds are used selected from the list: 5-bromo-3-aminopyridine-2-thiol, 5-trifluoromethyl-3-aminopyridine-2-thiol, 5-chloro-3-aminopyridine-2-thiol, methyl 3-aminopyridine-2-thiol-5-carboxylate; chloroform is used as the organic solvent. Trifluoroacetic acid is used as condensing agent, followed by the isolation of target products using standard methods.
