

Sliding car trailer comprises a floor, side walls, and hydraulic cylinders. The side walls consist of lower sections and sliding upper sections, which are located on the inner end surfaces of the lower sections of the side walls and can be displaced relative to them, wherein the extendable upper sections of the side walls are connected at their lower end surfaces to hydraulic cylinders located on the side surfaces of the floor; furthermore, the lower sections of the side walls are rigidly secured to the floor, which is rigidly secured to the frame.
