

Shoe brake includes a base, two brake levers mounted on the base, brake pads with friction linings, a connecting rod, a clamping spring with an adjusting nut and a square washer mounted in a bracket on the clamping rod, which is mounted between the brake levers in the hinge fingers, a three-arm lever, a brake pulley and a drive. A damping spring is mounted on the clamping rod, which contacts the bracket with one end and the other end contacts the adjusting nuts with a washer.
