

Transformable cuff-ring jewelry piece consists of an arched hollow component featuring through-holes, wherein elastic fasteners installed inside the arched hollow component, as well as a flexible element installed inside the arched hollow component, designed to pass through the through-holes of the arched hollow component. The jewelry piece is made with the possibility of adopting spatial positions suitable for wearing both as a cuff on the ear and as a ring on a finger, wherein, the jewelry piece is designed to allow for size adjustment when used as a ring by changing the position of the flexible element relative to the elastic fasteners.
