

Stone-processing machine consists of a work surface, a power module designed to supply power to the machine's components, an operator panel connected to the control unit, which are connected to the machining module, equipped with a housing containing at least electrically driven milling and polishing tools, a water supply system, and an air supply system. The machine is equipped with at least one clamping element designed to secure the blank in the working position. The work surface is situated on the machine bed. The machining module is placed on a support structure and is designed to move and process the workpiece located on the work surface, as well as to adjust the height of at least the milling and polishing tools.
