

Fire plow consists of a frame, a hitch, a support wheel, housings with plowshares, plow bodies, and plow blades. A water tank for a water jet system, a high-pressure pump for the water jet system used to cut materials, interconnected by a low-pressure pipeline, high-pressure pipelines, nozzle heads, and pipelines connected to the tractor's hydraulic system, skimmers. A frame with slit sprinklers directed away from each other in opposite directions, water shut-off valves, and a water level sensor are attached to the back of the frame. A pipe for drawing water from an external tank with a quick-release coupling is equipped at its end.
