

Exterior decorative car customization component is made of sheet material cut to a specific shape. The sheet material consists of an aluminum-polymer sandwich panel. Along at least a portion of the peripheral edge of the sandwich panel, on one of its sides, a cover being a strip of polyvinyl chloride is attached, the thickness of which is at least twice that of the sandwich panel. The thickness of the sandwich panel is 3–4 mm, and the thickness of the overlay is 8–10 mm. The strip is attached to the sandwich panel by gluing. The sandwich panel is designed with holes for fastening to the vehicle's body components using threaded fasteners.
