

This invention relates to new crystal solid forms of the chemical compound N-{4-[(6,7-dimethoxyquinolin-4-yl)oxy]phenyl}-N'-(4-fluorophenyl)cyclopropane-1,1-dicarboxamide (compound 1) and its solvates, including hydrates, which can be used for the treatment of cancer. Also described are pharmaceutical compositions containing the crystal solid forms, methods for obtaining the crystal solid forms, and methods for their use in the treatment of cancer, in particular, thyroid cancer, prostate cancer, hepatocellular carcinoma, kidney cancer, and non-small-cell lung cancer. Crystal solid forms may be used to prepare the L-malate salt of cabozantinib.
