

Invention relates to the field of pharmacy and medicine, in particular to virology, and may be used for the treatment of mixed herpes virus skin infections. Objective of invention is to create new combined agent in the form of an ointment for use in antiviral therapy. Objective is achieved by developing antiviral agent in the form of an ointment containing the active ingredients acyclovir and additionally incorporated miramistin with patchouli essential oil, as well as excipients: vaseline oil, paraffin, cetostearyl alcohol for preparing the ointment base, and propylene glycol, which is used as a co-solvent.
